Vedam School of Technology

Tech Club: 5 Fun Event Proposals

Engaging, low-cost events that mix coding, creativity and teamwork.

Event 1: Code Relay

A team coding race where every teammate picks up exactly where the last one stopped.

1. Event Description	Teams of four solve one big problem in a relay. Each member gets 10 minutes at the single team laptop to write a part of the solution, then must hand over. Teammates can't talk during a turn, so clean code and good comments decide who wins.
2. Event Flow	1. Teams register and are shown the problem statement on screen. 2. Round starts: Member 1 codes for 10 minutes, then swaps with Member 2 (no talking while coding). 3. Rotation continues until all four have coded twice (8 turns total). 4. Teams submit and the final code is run against hidden test cases. 5. Results and a short code walkthrough of the winning team.
3. No. of Participants	Teams of 4; 8 to 12 teams (32 to 48 participants).
4. Eligibility	Open to all Vedam students, any year. Basic programming knowledge in Python, Java or C++ is enough. Each team must have at least one first or second year student.
5. Judging Criteria	• Correctness: test cases passed (50%) • Code readability and comments (20%) • Time taken (20%) • Smooth handover between members (10%)
6. Duration	90 minutes (10 min briefing, 60 min relay, 20 min evaluation and results).
7. Resources Required	• One laptop per team with a code editor and internet disabled • Projector and live countdown timer • Judge's test cases and an auto-evaluation script • A set of problem statements (easy, medium) • Prizes and certificates

Event 2: Bug Bounty Escape Room

Lock the teams in a puzzle room where every lock opens only when a bug is fixed.

1. Event Description	A tech-themed escape room. Each locked step shows broken code, a corrupted log file or a wrong output. Teams must debug it to reveal a passcode that opens the next step. First team to escape wins.
2. Event Flow	1. Teams get a short story: the college server has been hacked, and they must fix it to escape. 2. Stage 1: Fix a syntax error to get the first code. 3. Stage 2: Decode a logic bug in a function to get the second code. 4. Stage 3: Find the hidden clue in a log file or a web page. 5. Stage 4: Solve a final mini-puzzle and enter the master passcode. 6. Time stops once the final passcode is entered correctly.
3. No. of Participants	Teams of 3; 8 to 10 teams (24 to 30 participants), run in 2 or 3 batches.
4. Eligibility	Open to all Vedam students. No advanced skills needed: the puzzles are designed for beginners as well as strong coders.
5. Judging Criteria	• Total escape time (60%) • Number of stages cleared (30%) • Hints used: each hint adds a time penalty (10%)
6. Duration	20 to 25 minutes per team, about 2.5 hours for the whole event including batches.
7. Resources Required	• A room or lab with controlled entry • Laptops preloaded with buggy code and log files • Printed clue cards and physical padlocks or number locks • Timer and a score board • Volunteers as game masters to give hints

Event 3: Tech Jeopardy Showdown

A buzzer-based quiz show where tech trivia, logos, memes and code puzzles collide.

1. Event Description	A fast, loud and funny quiz show in the style of Jeopardy. Teams pick a category and a points value, then race to buzz in. Categories mix serious and silly: Guess the Logo, Debug This Line, Tech Memes, Founders and Firsts, Acronym Madness and Emoji Decoder.
2. Event Flow	1. Teams are seated and a host explains the board and the rules. 2. Round 1: Standard board with 5 categories and 5 questions each (100 to 500 points). 3. Round 2: Double points, with a wager option on the 'Daily Double' question. 4. Wrong answers lose points, and the other teams get a chance to steal. 5. Final Question: every team writes down a wager and an answer, and the highest score wins.
3. No. of Participants	Teams of 3; 8 to 12 teams (24 to 36 participants), plus audience.
4. Eligibility	Open to all Vedam students, any year. No special skills needed, just curiosity about tech and pop culture.
5. Judging Criteria	• Total points at the end of the final question (100%) • Tie-breaker: a sudden death buzzer question • Bonus: 'Best Team Name' award by audience vote
6. Duration	90 minutes.
7. Resources Required	• Laptop with a Jeopardy-style slide template or a free online quiz board • Projector and speakers • Buzzers (or a buzzer app on phones) • A scoreboard and a volunteer scorekeeper • A question bank of 60 or more questions, reviewed by faculty or seniors • Small prizes for the winners

Event 4: Speed Build: 60-Minute Mini Hackathon

One surprise theme, one hour, and whatever you can build in it.

1. Event Description	A short and exciting mini hackathon. The theme is revealed only at the start (for example, 'make something useful for the hostel'), and teams have exactly 60 minutes to build a working prototype: a small website, a script, a bot or an app. Each team then demos it in 2 minutes.
2. Event Flow	1. Teams register and gather in the lab. Theme and rules are announced. 2. 60 minute build time starts, with mentors walking around to help if teams get stuck. 3. At the 30 minute mark, a surprise twist is announced (for example, 'it must work on a phone' or 'add a fun feature'). 4. Teams stop coding when the buzzer sounds. 5. Each team gives a 2 minute live demo to the judges. 6. Results and awards are announced.
3. No. of Participants	Teams of 2 to 3; 8 to 15 teams (16 to 45 participants).
4. Eligibility	Open to all Vedam students with basic coding or design skills. Beginners are encouraged to join with a stronger teammate.
5. Judging Criteria	• Working prototype (35%) • Creativity and usefulness of the idea (25%) • How well the surprise twist was handled (15%) • Demo and presentation (15%) • Code and design quality (10%)
6. Duration	2 hours (15 min setup, 60 min build, 30 min demos, 15 min results).
7. Resources Required	• Laptops, power extensions and strong Wi-Fi • Projector for the theme reveal, timer and demos • 2 to 3 mentors from faculty or seniors • Free tools: VS Code, GitHub, Figma or any framework of choice • Snacks and drinks to keep energy high • Prizes and certificates

Event 5: Campus Tech Treasure Hunt

Clues hidden around campus, solved with code, ciphers and teamwork.

1. Event Description	A campus-wide treasure hunt where every clue is a tech puzzle: a QR code, a binary message, a Caesar cipher, a Git commit or a small Python snippet whose output is the next location. The final clue leads to the treasure.
2. Event Flow	1. Teams get a starter clue and a team code at the opening point. 2. Each location has a QR code or a printed puzzle that must be solved to find the next spot. 3. Teams scan or photograph proof at every checkpoint. 4. A few checkpoints include a mini task such as a selfie in a funny pose or a 1 minute quiz. 5. The first team to reach the final location with all proofs wins.
3. No. of Participants	Teams of 4; 10 to 15 teams (40 to 60 participants).
4. Eligibility	Open to all Vedam students. Each team needs at least one smartphone and no running is allowed, only fast walking, for safety.
5. Judging Criteria	• Finish time (50%) • Checkpoints completed correctly (30%) • Teamwork and sportsmanship (10%) • Creativity in proof submissions (10%)
6. Duration	90 minutes to 2 hours.
7. Resources Required	• 8 to 10 QR codes and printed clue cards • Volunteers at checkpoints • A campus map and permission for chosen locations • Phones with a QR scanner and mobile data • Team folders, a scoreboard and a final prize hamper
